

121 LED Sconce

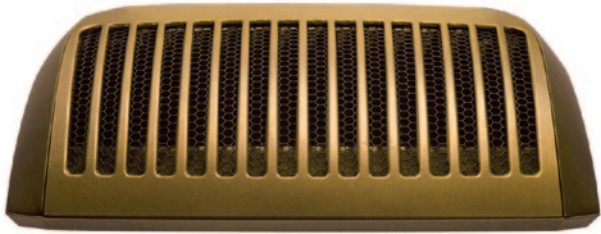

Introducing Emergency Cold Temperature Models

PHILIPS

Emergency lighting doesn't need to look like a catastrophe

The choices for outdoor emergency lighting leave a lot to be desired. Philips Gardco is pleased to introduce the addition of emergency lighting capabilities to its popular 121 line of LED performance sconces. No longer must you sacrifice aesthetics for safety.

Available with both the 35w and 50w constant wattage configurations, the integral emergency cold temperature components provide light when it is needed most. Both wattages provide emergency mode lighting for a minimum period of 90 minutes and are rated for ambient temperatures from 40°C/104°F down to -20°C/-4°F.

The 121 Emergency luminaires utilize an integral emergency pack consisting of a high-temperature nickel metal hydride battery with charging and electronic circuitry on a protected circuit board.

Test Switch

The indicator light and test switch are clearly visible and are easily accessible.
